

## CALTECH Environment Health & Safety - Glove Selection QUICK GUIDE

Glove Material	Intended Use	Advantages and Disadvantages	Example Photos
<b>Latex (natural rubber)</b>	Incidental contact	<p>Good for biological and water-based materials.                      Poor for organic solvents.                      Hard to detect puncture holes.                      Can cause or trigger latex allergies.</p>	
<b>Nitrile</b>	<p>Incidental contact (disposable exam glove)                      Extended contact (thicker reusable glove)</p>	<p>Excellent general use glove. Good for solvents, oils, greases, and some acids and bases.                      Clear indication of tears and breaks.                      Good alternative for those with latex allergies.</p>	
<b>Butyl rubber</b>	Extended contact	<p>Good for ketones and esters.                      Poor for gasoline and aliphatic, aromatic, and halogenated hydrocarbons.</p>	
<b>Neoprene</b>	Extended contact	<p>Good for acids, bases, alcohols, fuels, peroxides, hydrocarbons, and phenols.                      Poor for halogenated and aromatic hydrocarbons.                      Good for most hazardous chemicals.</p>	
<b>Norfoil</b>	Extended contact	<p>Good for most hazardous chemicals.                      Poor fit (Note: Dexterity can be partially regained by using a heavier weight Nitrile glove over the Norfoil/Silver Shield glove.)</p>	
<b>Viton</b>	Extended contact	<p>Good for chlorinated and aromatic solvents.                      Good resistance to cuts and abrasions.                      Poor for ketones.                      Expensive.</p>

## CALTECH Environment Health & Safety - Glove Selection QUICK GUIDE

Glove material	Intended use	Advantages and disadvantages	Example Photos
<b>Polyvinyl chloride (PVC)</b>	Specific use	Good for acids, bases, oils, fats, peroxides, and amines. Good resistance to abrasions Poor for most organic solvents.	
<b>Polyvinyl alcohol (PVA)</b>	Specific use	Good for aromatic and chlorinated solvents. Poor for water-based solutions.	
<b>Stainless Steel</b>  <b>Kevlar</b>  <b>Leather</b>	Specific use	Cut-resistant Gloves  Sleeves are also available to provide protection to wrists and forearms.  (If potential for biological or chemical contamination: wear appropriate disposable gloves on top of your cut-resistant gloves and discard after use).	
<b>Cryogenic Resistant Material</b>  <b>Leather</b>	Specific use	For use with cryogenic materials.  Designed to prevent frostbite. Note: Never dip gloves directly into liquid nitrogen.	
<b>Nomex</b>	Specific use	For use with pyrophoric materials.  Consider wearing a flame-resistant glove such as a Nomex 'flight' glove with a thin nitrile exam glove underneath.
