

CHEMICAL HAZARDOUS WASTE PROCEDURES

FOR LABORATORY AREAS

In light of recent COVID-19 events, should researchers be requested to begin closing down research experiments, the following considerations should be taken into account on the disposal of hazardous chemical waste.

Scheduled Waste Pickups:

- If the research lab space presently is scheduled on a regular hazardous waste pickup, please follow your regular procedure to place items in your Satellite Accumulation Areas in the lab.

Non-Scheduled Waste Pickups:

- If the research lab space presently is not scheduled on a regular hazardous waste pickup, or you require a special pickup, please follow procedures to set up an AIM request online for the pick-up.

Waste Tags:

- Please remember to fill out waste tags appropriately with the top two chemical constituents that identify the chemical properties.

Unknowns:

- Please store unknown items appropriately and safely. We will manage these issues when research operations are restored. As a note, if you place them in the hazwaste Satellite Accumulation Area it will left behind in your lab.
